BOX 6A: VERY HIGH RISK FOR RECURRENT STROKE

Box 6A:

**VERY HIGH Risk for Recurrent Stroke (Symptom onset within last 48 Hours):** Patients who present within 48 hours of a suspected transient ischemic attack or non-disabling ischemic stroke with the following symptoms are considered at highest risk of first or recurrent stroke: transient, fluctuating or persistent unilateral weakness (face, arm and/or leg); transient, fluctuating or persistent language/speech disturbance; and/or fluctuating or persistent symptoms without motor weakness or language/speech disturbance (e.g. hemibody sensory symptoms, monocular vision loss, hemifield vision loss, +/- other symptoms suggestive of posterior circulation stroke such as binocular diplopia, dysarthria, dysphagia, ataxia).

For additional risk stratification, refer to Section Two of this module.
